PATENT  
Filed: January 26, 2001

1. (original) A method for broadcast encryption, comprising:
  - assigning each user in a group of users respective private information  $L_i$ ;
  - selecting at least one session encryption key  $K$ ;
  - partitioning users not in a revoked set  $R$  into disjoint subsets  $S_1, \dots, S_m$  having associated subset keys  $L_{i1}, \dots, L_{im}$ ; and
  - encrypting the session key  $K$  with the subset keys  $L_1, \dots, L_m$  to render  $m$  encrypted versions of the session key  $K$ .
2. (original) The method of Claim 1, further comprising partitioning the users into groups  $S_1, \dots, S_w$ , wherein "w" is an integer, and the groups establish subtrees in a tree.
3. (original) The method of Claim 2, wherein the tree is a complete binary tree.
4. (original) The method of Claim 1, further comprising using private information  $L_i$  to decrypt the session key.
5. (original) The method of Claim 4, wherein the act of decrypting includes using information  $i$  such that a user belongs to a subset  $S_{ij}$ , and retrieving a subset key  $L_{ij}$  using the private information of the user.

PATENT  
Filed: January 26, 2001

6. (original) The method of Claim 2, wherein each subset  $S_{11}, \dots, S_{ku}$  includes all leaves in a subtree rooted at some node  $v_i$ , at least each node in the subtree being associated with a respective subset key.
7. (original) The method of Claim 6, wherein content is provided to users in at least one message defining a header, and the header includes at most  $r \cdot \log(N/r)$  subset keys and encryptions, wherein  $r$  is the number of users in the revoked set  $R$  and  $N$  is the total number of users.
8. (original) The method of Claim 6, wherein each user must store  $\log N$  keys, wherein  $N$  is the total number of users.
9. (original) The method of Claim 6, wherein content is provided to users in at least one message, and wherein each user processes the message using at most  $\log \log N$  operations plus a single decryption operation, wherein  $N$  is the total number of users.
10. (original) The method of Claim 6, wherein the revoked set  $R$  defines a spanning tree, and subtrees having roots attached to nodes of the spanning tree define the subsets.
11. (original) The method of Claim 2, wherein the tree includes a root and plural nodes, each node having at least one associated label, and wherein each subset includes all leaves in a subtree rooted at some node  $v_i$  that are not in the subtree rooted at some other node  $v_j$  that descends from  $v_i$ .

CASE NO.: ARC9-2001-0005-US1

PATENT  
Filed: January 26, 2001

12. (original) The method of Claim 11, wherein content is provided to users in at least one message defining a header, and the header includes at most  $2r-1$  subset keys and encryptions, wherein  $r$  is the number of users in the revoked set  $R$ .

13. (original) The method of Claim 11, wherein each user must store  $.5\log^2 N + .5\log N + 1$  keys, wherein  $N$  is the total number of users.

14. (original) The method of Claim 11, wherein content is provided to users in at least one message, and wherein each user processes the message using at most  $\log N$  operations plus a single decryption operation, wherein  $N$  is the total number of users.

15. (original) The method of Claim 11, wherein the revoked set  $R$  defines a spanning tree, and wherein the method includes:

initializing a cover tree  $T$  as the spanning tree;  
iteratively removing nodes from the cover tree  $T$  and adding nodes to a cover until the cover tree  $T$  has at most one node.

16. (original) The method of Claim 11, wherein each node has at least one label possibly induced by at least one of its ancestors, and wherein each user is assigned labels from all nodes hanging from a direct path between the user and the root but not from nodes in the direct path.

**PATENT**  
Filed: January 26, 2001

17. (original) The method of Claim 16, wherein labels are assigned to subsets using a pseudorandom sequence generator, and the act of decrypting includes evaluating the pseudorandom sequence generator.
18. (original) The method of Claim 1, wherein content is provided to users in at least one message having a header including a cryptographic function  $E_h$ , and the method includes prefix-truncating the cryptographic function  $E_L$ .
19. (original) The method of Claim 2, wherein the tree includes a root and plural nodes, each node having an associated key, and wherein each user is assigned keys from all nodes in a direct path between a leaf representing the user and the root.
20. (original) The method of Claim 1, wherein content is provided to users in at least one message defining plural portions, and each portion is encrypted with a respective session key.
21. (original) A computer program device, comprising:  
a computer program storage device including a program of instructions usable by a computer, comprising:  
logic means for accessing a tree to identify plural subset keys;  
logic means for encrypting a message with a session key;

1053-121.AM1

logic means for encrypting the session key at least once with each of the subset keys to render encrypted versions of the session key; and

logic means for sending the encrypted versions of the session key in a header of the message to plural stateless receivers.

22. (original) The computer program device of Claim 21, further comprising:

logic means for partitioning receivers not in a revoked set R into disjoint subsets  $S_{i1}, \dots, S_{im}$  having associated subset keys  $L_{i1}, \dots, L_{im}$ .

23. (original) The computer program device of Claim 22, further comprising logic means for partitioning the users into groups  $S_1, \dots, S_w$ , wherein "w" is an integer, and the groups establish subtrees in a tree.

24. (original) The computer program device of Claim 21, further comprising logic means for using private information  $I_u$  to decrypt the session key.

25. (original) The computer program device of Claim 24, wherein the means for decrypting includes logic means for using information  $i_j$  such that a receiver belongs to a subset  $S_{ij}$ , and retrieving a key  $L_{ij}$  from the private information of the receiver.
